Root Server System Advisory Committee

RSSAC Statement on the Transmission of the ICG and CCWG-Accountability Proposals

10 March 2016

The RSSAC congratulates the Internet stakeholder community for the transmission of the proposals, from the IANA Stewardship Transition Coordination Group and the Cross-Community Working Group on Enhancing ICANN Accountability, to the United States Department of Commerce National Telecommunications and Information Administration via the ICANN Board of Directors.

This is a momentous occasion in the history of ICANN and the multistakeholder model reflecting the culmination of nearly two years of dedicated work by committed volunteers across the world.

The RSSAC looks forward to actively participating in the implementation processes and will continue its work of advising the ICANN community and Board of Directors on matters relating to the operation, administration, security, and integrity of the root server system.
